

psrnatarget2fa

Command line or GUI program that retrieves the mRNA target fragments from the psRNATarget output against a single mRNA

Installation

Windows

- Download either the gui or the command line x64 app from the [Releases](#) tab
- Extract zip
- You can use the gui app directly you can also pin it to start and taskbar
- To use to command line app move it to:

```
C:\Windows\System32
```

linux

- To run the command line app download this repo
- Navigate to [src/cmd](#)
- Convert [psrnatarget2fa.py](#) to executable:

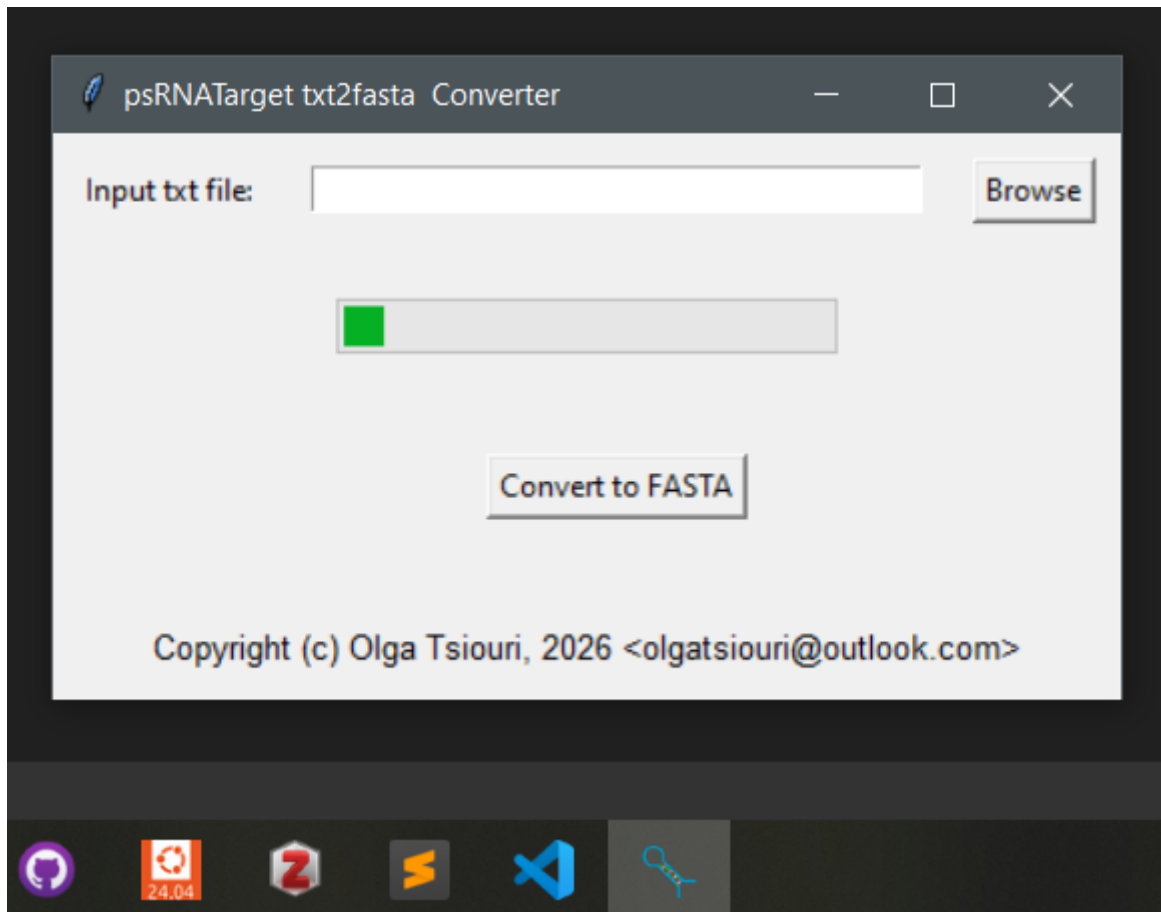

```
chmod +x psrnatarget2fa.py
```

Add it to PATH:

```
sudo cp psrnatarget2fa.py /usr/bin
```

Usage

GUI

- Click **Browse** to navigate to the **input** file
- Click **Convert to FASTA**

CMD

For windows:

```
psrnatarget psRNATargetJob-1776680362544351.txt
```

For linux:

```
psrnatarget.py psRNATargetJob-1776680362544351.txt
```

Note: This program assumes you check for target accessibility when running psRNATarget

Note: The output fasta file is stored in the folder where the input file is located
